

WHAT IS CONFIGFREE™?

ConfigFree™ is a software suite of utilities designed to simplify wireless and wired network connectivity on Toshiba notebook computers. The main ConfigFree elements, Connectivity Doctor, Profile Settings, Device Settings, Automatic Network Switch and Summit, help you manage wireless network connectivity wherever you happen to be.

WHY IS TOSHIBA OFFERING THIS SOFTWARE SUITE?

Customer feedback indicates that it's not always easy to setup and manage devices and peripherals. Mobile users require wireless connectivity and mobile computing to be simple to activate and to manage. Designed with Toshiba users in mind, ConfigFree™ is our response to customer needs and requirements. A single graphical interface allows easy network profiling and connectivity tasks, making it simple to configure a connection anywhere, anytime.

WHAT IS CONNECTIVITY DOCTOR?

The Connectivity Doctor identifies analyses and helps to resolve any network configuration problems that you may encounter. This proactive tool not only informs you of any connectivity issues but also guides you through the troubleshooting process to help solve the problem. If required, the Doctor can even help you find the switches for the wireless antennae on the Toshiba notebook. With this interactive and easy-to-use tool, network connectivity is simple to manage.

WHAT IS PROFILE SETTING AND SWITCHING?

Profiles are created for various kinds of connectivity, depending on your point of connection (in the office, on the road or at home) and type of communications (wired or wireless). By easily establishing and switching among various profiles, you no longer need to spend time reconfiguring your notebook while on the go. Whether you are in the office and need to switch from wired to wireless connectivity, or on the road and establishing a new wireless connection, you can manage connection profiles quickly and easily.

WHAT ARE DEVICE SETTINGS?

This tool helps you switch between network devices, for example from wired to wireless connections, by manually enabling or disabling hardware features. Device Settings simplify communication, allowing you to quickly enable or disable wireless devices (like LAN, WLAN, infrared and Bluetooth) as needed. For instance, you can easily activate or de-activate infrared or Bluetooth devices based on your wireless requirements.

WHAT IS THE AUTOMATIC NETWORK SWITCH?

The Automatic Network Switch offers continuous connectivity by simplifying device switching. Rather than manually enabling and disabling devices, the Auto Switch can disable a wireless LAN device when your notebook is connected to a wired LAN, for example, or automatically switch to a wireless LAN when the wired LAN cable is disconnected. On the other hand, if both the wired and wireless LAN

connections are disabled, Auto Switch changes to a dial-up connection for you. With ConfigFree 5.7 and higher, support for automatic WWAN switching is also available.

WHAT IS “SEARCH FOR WIRELESS DEVICES”?

“Search for Wireless Devices” displays nearby active Wi-Fi™ / 802.11 access points as well as any ad-hoc networks. Access points with a stronger radio signal are positioned closer to the centre of an intuitive radial diagram, while those with weaker radio signals are positioned farther from the centre. You can connect to a particular network or access point with a single click.

WHAT IS SUMMIT?

ConfigFree’s Summit utility creates a virtual conference room with other members using ConfigFree on the network. You can invite members to participate, then drag and drop files to share information with other conference members. Summit also provides a common storage area to place items for download by all members. While the conference is active, all members can type notes to a Memoboard that all other members can view and append real-time.

WILL CONFIGFREE™ MAKE ME MORE PRODUCTIVE?

This connectivity suite will make mobile working simpler and more productive by saving you time normally spent reconfiguring devices for various locations and network devices. Moreover, additional features enhance the productivity of the mobile worker. For instance, you can easily connect to a Toshiba wireless enabled projector to deliver presentations or spontaneously share ideas during meetings. With wireless presentations, communications are simple, spontaneous and effective.

FOR WHAT MODELS IS THIS SOFTWARE AVAILABLE?

ConfigFree™ software utilities are bundled with the latest Toshiba notebooks and are also available for download onto a selected range of existing Toshiba models. Please refer to the “Download Software” section for the latest details: http://eu.computers.toshiba-europe.com/cgi-bin/ToshibaCSG/download_drivers_bios.jsp.

WHAT ARE THE SUPPORTED OPERATING SYSTEMS FOR CONFIGFREE™?

The Toshiba range of notebook PC’s support the following operating systems: Microsoft® Windows® XP (including the Home, Pro and Tablet PC editions) and Microsoft® Windows® 2000.

WHAT LANGUAGES ARE SUPPORTED?

The Toshiba range of notebook PC’s support these languages: English, German, French, Swedish, Italian, Spanish, Czech, Polish, Dutch, Norwegian, Danish, Finnish, Portuguese, and Japanese.

**CAN I BUY THIS SOFTWARE?**

No, this software is only available with selected Toshiba notebook models. However, you can download the ConfigFree software or any upgrade version for use on selected Toshiba notebooks, including some models that did not originally ship with the software. Please see the following link for more information:
