

TOSHIBA CONFIGFREE™ IN ACTION INSTANT ACCESS: MANAGING PROFILES

ConfigFree™ is a unique software utility that makes it easy to manage wired and wireless connections.

Incorporating wireless productivity features, ConfigFree enables you to use wireless networking for enhanced data exchange and meeting functionality.

PROFILE SETTINGS – Easily capture location-based connectivity profiles for future use. Automatically switch profiles for enhanced mobile working.

CONFIGFREE™ SUMMIT – Establish net meetings in an instant. Documents can be shared with drag and drop functionality.

WIRELESS RADAR – This intuitive radar screen graphical user interface displays nearby wireless devices and enables drag & drop connectivity-

CONNECTIVITY DOCTOR – Analyses your network connection and assists in diagnosing and fixing the problem.

MOBILITY ISSUE CONNECTIONS FOR MOBILE WORKING, MOBILE LIFESTYLE

Working at various sites is now a common practice among high-mobility notebook users. Having to reconfigure connection settings for each location – home, school, or the office – can be a problematic and complex task. Mobile professionals need a hassle-free way to manage a multitude of network and connectivity settings.

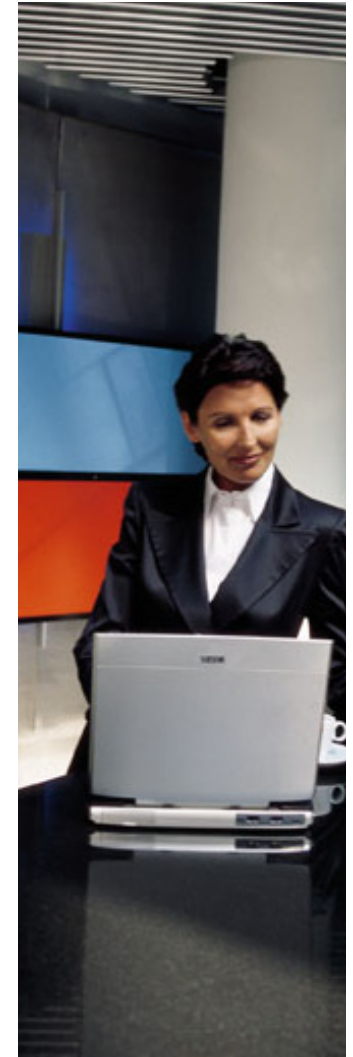

MOBILITY SOLUTION INSTANTLY MAKE THE RIGHT CONNECTIONS AT ANY LOCATION

ConfigFree allows you to build and manage a list of profiles with an option for automatic switching between locations.

Internet settings, network printers, and other connection details can be saved as the default options for a specific location. By choosing a profile from the list, network settings can be reconfigured easily.

KEY BENEFITS LOCATION-BASED PROFILES

- Easily capture and store profiles for location-based connectivity
- Automatically switch profiles for instant connectivity
- Save time and energy with profile management - network, printer and other default settings can be instantly enabled as you move

LOCATION-BASED PROFILE MANAGEMENT

At different locations, users make different network connections and connect to various peripherals. Changing the connectivity settings and defaults for peripherals such as a printer, can be time-consuming.

Changing network settings is particularly challenging as it means remembering the configuration details for various locations. This information must be deleted and then re-entered each time the user switches from one location to another.

To avoid hassles and save time, profiles allow users to capture settings for various locations and save them for future use. The location settings can be easily edited when configuration changes occur.

This means the user no longer has to worry about remembering and changing all of these settings as he or she moves from one location to another.

Instead, using the Auto Switch function of ConfigFree can detect and enable the appropriate settings for the user as he or she moves among locations and location-based profiles.

1 EASILY CAPTURE PROFILES

The Profile capture wizard lets you capture your network and device settings easily and quickly.

2 EASILY EDIT AND VIEW PROFILES

Select the Profile tab header on the ConfigFree main window to display the Profile Settings tab, as shown to the left. You can use this tab to create a profile, edit a profile, view a profile configuration, and switch profiles.

3 AUTOMATICALLY SWITCH PROFILES FOR INSTANT CONNECTIVITY ON THE MOVE

ConfigFree uses the Auto Switch (Cable Disconnect) function to switch network devices automatically when a wired network cable is disconnected.

To activate the Auto Switch function, switch to the Device Settings tab, and ensure the 'Enable wireless when cable disconnect occurs' box is selected.
