

TOSHIBA CONFIGFREE™ IN ACTION SEAMLESS CONNECTIVITY

ConfigFree™ is a unique software utility that makes it easy to manage wired and wireless connections.

Incorporating wireless productivity features, ConfigFree™ enables you to use wireless networking for enhanced data exchange and meeting functionality.

PROFILE SETTINGS – Easily capture location-based connectivity profiles for future use. automatically switch profiles for enhanced mobile working.

CONFIGFREE™ SUMMIT – Establish net meetings in an instant. documents can be shared with drag and drop functionality.

WIRELESS RADAR – This intuitive radar screen graphical user interface displays nearby wireless devices and enables drag & drop connectivity.

CONNECTIVITY DOCTOR – Analyses your network connection and assists in diagnosing and fixing the problem.

MOBILITY ISSUE THE NEED FOR SEAMLESS CONNECTIVITY

Mobile professionals need access to a growing number of information sources to keep connected on the go. Managing different connection settings and maintaining constant connectivity can take up much needed time while in transit. Seamless connectivity provides mobile professionals with the optimal conditions for enhanced productivity.

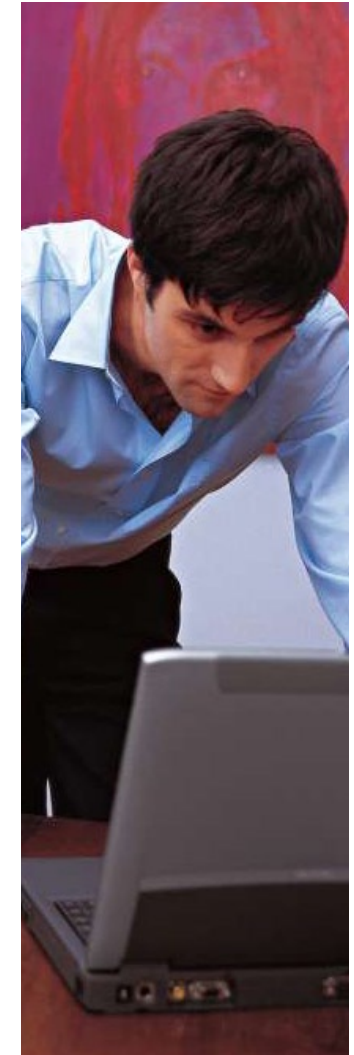

MOBILITY SOLUTION CONFIGFREE 5.7™ - NOW WITH WWAN SUPPORT

With ConfigFree 5.7™, connectivity from a wired network to a wireless network to a wireless wide area network with 3G mobile phone access can be easily automated.

The Automatic Network Switch provides seamless connectivity, detecting which network connections are present and switching to another pre-selected connection when necessary.

KEY BENEFITS AUTOMATIC NETWORK SWITCH

- Choose your own connectivity priority lists
- Maintain seamless connectivity - switch among wired, wireless and 3G connections

SWITCHING FROM LAN TO WLAN TO WWAN

The Automatic Network Switch lets you switch automatically from wired to wireless to WWAN / 3G connectivity.

If the LAN connection is unavailable, wireless LAN settings will be automatically enabled.

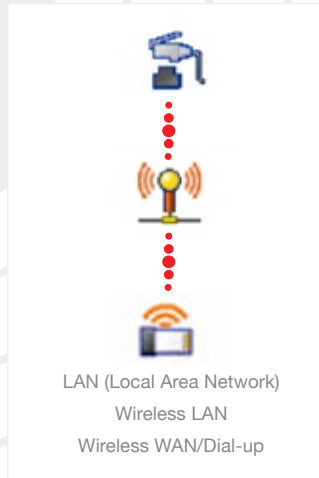

If both LAN and wireless LAN connections are not available, a dial-up connection to the Internet or a 3G enabled mobile phone will be established.

In this way, the Automatic Network Switch can be used to ensure seamless connectivity.

1 CREATE YOUR CONNECTIVITY PRIORITY LIST

To manage wired and wireless devices utilised in the Automatic Network Switch, select Device Settings from either the ConfigFree™ main program or the tray menu and choose which connections should be enabled when the LAN cable is disconnected.

2 EXPERIENCE SEAMLESS CONNECTIVITY

The Automatic Network Switch also takes into account your profile settings for different wireless connections. To set a specific profile depending on which WLAN connection is in use, select the Auto Switch (SSID) function. When the SSID is recognized, the corresponding profile will be selected automatically.
